1. This action is in response to the amendment filed on 7/13/04.

- 2. Claims 1 and 16 have been amended.
- 3. Claims 1-42 have been rejected.

### Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 16 are rejected under 35 U.S.C. 102(a) as being anticipated by Mattaway et al, (Mattaway), US 6,226,678.

As per amended claims 1, and 16, Mattaway discloses:

Dynamically matching a first type of the first process and a second type of the second process (Mattaway, col 17, lines 1-20), where Webphone software able to communicate between first process and second process (col 17, lines 15-2) and the Webphone API utilizes t transfer data of different type( col 17, lines 5-8) and Webphone transfers the data in real-time (dynamically). It clearly shows that "Dynamically matching a first type of the first process and a second type of the second process" as claimed and (col 20, lies 43-56).

Using a library to dynamically match the first type of the first process and the second type of the second process (Mattaway, col 17, lines 1-20, col 20, lies 43-56),

Application/Control Number: 09/905,630

Art Unit: 2122

Mattaway discloses that the system establishes a real-time communication (see Abstract) using dynamic link library (col 15, lines 46-54).

For the rest of the limitations of claim 1, see the rejection of claim 1 in the previous office action.

For the rest of the limitations of claim 16, see the rejection of claim 16 in the previous office action.

# Response to the Arguments

- 5. Applicant's argument filed on 9/13/04 have been fully considered but they are not persuasive. In remarks, the applicant argues is substance:
- (1) Mattaway does not disclose dynamic type matching.

### Response:

- (1) Mattaway discloses dynamic type matching (Mattaway, col 17, lines 1-20, col 20, lies 43-56, Abstract, and col 15, lines 46-54. See the rejections of claim 1 and 16 above.
- (2) Mattaway does not disclose "the flow control **backs up** information at the flow origin".

# Response:

(2) Mattaway discloses "the flow control **backs up** information at the flow origin" (Mattaway, col 12, lines 15-35), where the a signal (flow control) is delivered from a process unit to a second processing unit and the second processing unit extracts the

Art Unit: 2122

session number and the IP address (information) and transmits or sends (backs up) the session number (information) to the first processing unit (flow origin). It clearly shows that the flow control backs up information to the origin (first processing unit).

(3) Mattaway does not disclose "preventing an overflow of information to a flow recipient".

# Response:

- (3) Mattaway discloses "preventing an overflow of information to a flow recipient" is shown in column 19, lines 30-50, where the client wishes to receive all the records (information) (col 19, lines 34-35), and when the number of records (information) are excessively large (overflow), the system transmits a <INFO ABORT> packet (col 19, lines 35-36). It clearly shows that by sending <INFO ABORT> packet the system prevents the overflow of information.
- (4) Neither Mattaway nor the computer Dictionary provides sufficient motivation or any reasonable expectation of success to one of the ordinary skill in the art to modify the disclosure in Mattaway with the definition of asynchronous connection in the computer dictionary.

#### Response:

(4) Examiner strongly disagree with the statement that there is a lack of motivation to one of the ordinary skill in the art to modify the disclosure in Mattaway with the definition of asynchronous communications in the computer dictionary.

As per claim 26 and claim 32, Mattaway discloses a *dynamic communication* between a first process and a second process by using a dynamic link library (abstract, col 4, lines 38-40, col 15, lines 10-15). Mattaway does not specifically disclose *asynchronous* communication. However, *Asynchronous communication or asynchronous data transmission is well known in the art.* The examiner cited "computer dictionary's" definition for "asynchronous transmission".

The modification would be obvious because the transmission can proceed independently and does not need to depend the timing of other process, i.e., the system has a potential flexibility to transmit the data because asynchronous transmission does not need to depend on the receiver's state.

#### Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 09/905,630

Art Unit: 2122

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
